| Date Revised          | January 1, 2025                                                                                                                                                                                    |
| Issued Department     | Quality Assurance Department Tohoku Murata Manufacturing Co., Ltd.                                                                                                                                 |
| Issuing person        | Shun Sato — Latu                                                                                                                                                                                   |

The model name attached % means that valid for all models which the singular/plural digits of alphanumeric or marks (including a space) attached after the model name.

# 2. Hazard identification

| The important hazards and adverse effects of the chemical product | No information available |                                                                                                                                                                                                                                                                                                                                                                    |  |  |
|-------------------------------------------------------------------|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|
| Chemical product- specific hazards                                | No informa               | No information available                                                                                                                                                                                                                                                                                                                                           |  |  |
| Outline of an anticipated emergency                               | Hazard                   | Coin manganese dioxide lithium batteries contain flammable materials such as organic solvent and metallic lithium.  If battery was disposed in fire, or battery temperature exceede 100°C, explosion or ignition of the battery may be caused. When short-circuit is caused by jumbling the batteries, explosion or ignition may be caused due to heat generation. |  |  |
|                                                                   | Toxicity                 | When battery is burned, generated vapor may cause eyes, skin and respiratory irritation.                                                                                                                                                                                                                                                                           |  |  |

# 3. Composition/information on ingredients

| Portion     | Ingredient              | CAS No.    | Content ratio wt%      |
|-------------|-------------------------|------------|------------------------|
| Cathode     | Manganese Dioxide       | 1313-13-9  | 20~40 wt%              |
| Anode       | Metallic Lithium        | 7439-93-2  | 1~3 wt% ( Li < 0.3g *) |
|             | Dimethoxyethane         | 110-71-4   | 1~7 wt%                |
| E1414.      | Propylene Carbonate     | 108-32-7   | 2~9wt%                 |
| Electrolyte | Lithium Perchlorate     | 7791-03-9  | 0.3~0.9wt%             |
|             | Acid Phthalic Anhydride | 85-44-9    | 0~0.1wt%               |
| O41         | Stainless Steel         | 65997-19-5 | 40~65wt%               |
| Others      | Polypropylene           | 9003-07-0  | 2~5wt%                 |

<sup>\*</sup> CR3677X%: Metallic Lithium weight exceeds 0.3g to 1g or less.

# 4. First aid measures

| Swallowing   | Ingestion of a battery can be harmful.  Contents of an opened battery can cause serious chemical burns of mouth, esophagus and gastrointestinal tract. In either case, do not induce vomiting nor give food or drink.  Seek medical attention immediately. |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Skin Contact | Contents of an opened battery can cause skin irritation.  Wash skin with soap and water.  If inflammation was caused on the skin, seek the medical attention.                                                                                              |
| Eye Contact  | Contents of an opened battery can cause eye irritation.  Immediately flush eyes thoroughly with water for several minutes.  Seek medical attention.                                                                                                        |
| Inhalation   | Contents of an opened battery can cause respiratory irritation.  Provide fresh air and call a doctor.                                                                                                                                                      |

# 5. Fire fighting measures

|                     | Powder, Carbon dioxide and Dry sand.                                             |
|---------------------|----------------------------------------------------------------------------------|
| Extinguishing Media | Metallic Lithium contained in a battery reacts with water strongly, as a result, |
|                     | generates hydrogen gas. Extinguishing by water may cause explosion.              |

# <u>6. Accidental release measures</u> (In the case that electrolyte is leaked from battery.)

| Personal precautions      | Temporary inhalation of odor and attaching of electrolyte to skin does not cause serious health hazard.  Be sure the ventilation and washing out of electrolyte quickly. |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Environmental precautions | Wipe off with dry cloth and keep away from fire.                                                                                                                         |

#### 7. Precautions for safe handling and use

|          | Since improper battery handling may cause leakage, overheating or explosion of the battery, the following precautions shall be observed.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Handling | <ol> <li>Keep batteries away from children.         Swallowing a battery can cause chemical burn or penetration of the mucous membrane tissue, in the worst case, may result in death.         If infant happens to swallow a battery, seek medical attention immediately to take it out.</li> <li>Do not short.</li> <li>Insert batteries with positive (+) and negative (-) terminals correctly oriented.</li> <li>Do not mix different type batteries or mix new and old ones together.</li> <li>Do not directly heat, solder or throw into fire.</li> <li>Do not modify, deform or disassemble the battery.</li> <li>Do not have children replace batteries unsupervised by adults.</li> <li>In case of swallowed battery, seek medical attention immediately.</li> <li>This battery is not designed for recharging. To do so can cause leakage or explosion.</li> </ol> |
| Storage  | Store in a cool, well-ventilated area.  Do not store batteries at high-temperatures or high-humidity.  Proper storage temperature is +5°C~+35°C.  It is preferable not to exceed +35°C.  Avoid extremely higher or lower humidity (85% or more, 45% or less).  Avoid exposure to sunlight to prevent performance deterioration, swelling or leakage.  Elevated temperature can result in shortened battery life.  Since short circuit can cause burn hazard and leak or explode hazard, do not batteries jumbled in containers. Avoid to contact water, metallic chain or metallic chip which may result in short-circuit.                                                                                                                                                                                                                                                   |

#### 8. Exposure controls/personal protection

N/A

### 9. Physical and chemical properties

| Condition       | Solid      |  |  |
|-----------------|------------|--|--|
| Appearance      | Coin Shape |  |  |
| Nominal voltage | 3 V        |  |  |

#### 10. Stability and reactivity

Stability : Stable under normal conditions of use.

Condition to avoid : See Section 7.

#### 11. Toxicological information

Under normal conditions of use, there is no risk to life and health, because ingredients of battery is hermetical sealed with metal case.

### 12. Ecological information

When exhausted battery is buried in the ground, it is confirmed that outflow of metal contained in the battery has been seldom found. But we have no ecological information.

#### 13. Disposal considerations

When battery is disposed, isolate positive (+) and negative (-) terminals of the battery to avoid those terminals from touching each other. Batteries may be short-circuited when piled up or mixed with the other batteries in disorder.

Dispose in accordance with applicable federal, state and local regulations.

### [Sea transportation]

All lithium metal cells shipping from Tohoku Murata Manufacturing Co., Ltd. and their packing condition conform to the following regulations and meet the requirements, therefore they can be shipped as exemption from Class 9 Dangerous goods.

#### Outline of IMO-IMDG Code 2022 SP188

- For a lithium metal cell, aggregate lithium content is not more than 1g.
- Each cell is of the type proven to meet the requirements of each test in the UN Manual of Tests and Criteria 8<sup>th</sup> revised edition, Part III, subsection 38.3.
- Cells shall be packed in inner packagings that completely enclose the cell.
- Each package shall be capable of withstanding a 1.2m drop test in any orientation without damage to cells contained therein, without shifting of the contents so as to allow battery to battery contact and without release of contents.
- · Package shall not exceed 30kg gross mass.
- The specified information shall be indicated on each package.
- Each cell shall be manufactured under quality program specified by the United Nations.

<sup>\*</sup>As all of murata Coin manganese dioxide lithium batteries contain lithium metals less than 1.0g, Packing Instruction 969/970 can be applicable to the products that murata Coin manganese dioxide lithium batteries are assembled into.

The equipment is excluded from dangerous goods regulation.

When our cell or battery is contained in equipment or packed with equipment, it is classified into UN3091.
